JavaScript Workshop

Build out a calculator on a web page that mimics the look and feel of the Calculator that you get on the Windows system. At the bare minimum it should have –

- An input control that allows you to toggle between a standard and scientific calculator.
- An output display.
- Controls to feed in numbers.
- Controls to feed in operations.
- A control that removes one digit at a time (the <- button)
- A control that resets the entire state (the C button)

Standard operations include -

- Addition
- Subtraction
- Multiplication
- Division

Scientific operations include –

- Square
- Cube
- Square root
